High Purity Crushing by SELFRAG

The solution for high quality sizing of silicon or other high purity materials

The innovative contactless crushing method combines the lowest contamination with selectable target size distribution to set new standards in the high purity materials industry.

Fully automated production lines are available with throughputs from 1,000 up to 15,000 metric tons per year.

World market leaders in silicon production have already installed SELFRAG systems to increase their production efficiency and product quality.

Key Specs:

- Throughput up to 15,000 t/y
- Automated and traceable process
- Selectable target size distribution
- High purity process – no mechanical contact of material with crushing parts
- High sphericity product
- Minimal manpower required
